

Glystantin[®]: The 3-fold premium protection for the cooling system

With 3-fold protection against corrosion, overheating and frost, Glystantin[®] protects the long-term functional reliability of cooling systems. Glystantin[®] – the original – is ideally suited for all engines and vehicle types.

www.glystantin.com

“Learn the most important basic rules on cooler protection from me.”

- Water alone is not enough to cool the system – only when it is mixed with protective Glystantin[®] concentrate can damage be avoided. The problem? Water without coolant concentrate expands when it freezes, boils at 100 degrees Celsius and causes rust to form more quickly.
- Never use undiluted coolant! With this mixture, you'll always be in safe hands: Glystantin[®]/Water: 50/50 (1/1 parts)
- Never mix coolants containing different technologies or coolants made by different manufacturers!
- You can find further information and tips about the right Glystantin[®] product for your vehicle, on our 32 language bottle label, on our orientation list or in the internet at www.glystantin.com

Always remember the following:

- Always completely change the coolant during repairs (flush and clean cooling system beforehand).
- With older cars, change coolant every 3 to 4 years.
- Use clean (not too hard) tap water, fully deionized or distilled water.
- Read your vehicle manufacturer's instructions.

➔ Note: Using coolant in the wrong way can leave your cooling system unprotected and may damage it!

Please find the right Glystantin[®] product on the rear page.
